

KEMPER

Quality is our standard – this statement is both our philosophy and obligation. It inimitably expresses the basic values which have characterised Gebr. Kemper Metallwerke since they were founded in 1864 and above all have made the company what it is today: one of the most respected specialists for high quality precision non-ferrous metal products and semi-finished products and goods. And so the traditional values which made the company grow are today merged with state of the art technology and customer-oriented service.

KEMPER – Continuity and reliable growth

KEMPER has been an entirely family-owned, independent and autonomous company for over 140 years.

Continuity in company management and a clear route to the German location are the basis for the healthy expansion. A success story, around the world.

KEMPER MEANS RELIABILITY

KEMPER – unique competence in non-ferrous metals

Valves, cast products and rolled strips: three divisions in which Gebr. Kemper GmbH + Co. KG from Olpe in Germany has grown successfully:

- ▶ our own sanitary valve programme for drinking water installations throughout Europe,
- ▶ demanding customer cast products and
- ▶ non-ferrous metal semis in the form of strips for the worldwide automotive, communications, electrical and electronics industries.

Quality which produces satisfaction

Starting with the basic copper material we provide all the important casting and processing techniques for copper alloys. State of the art production technology and process monitoring guarantee the high quality standard of our whole range of products – from domestic water systems through to micro-electronics.

KEMPER, that is the employees, for sure

The key drivers of the success are the people. The motivation of the 600 employees is exceptional; the fluctuation of the personnel is almost zero. KEMPER trains beyond the standard in all areas. Continuous education and extended training are part of the company's identity.

KEMPER Valves

Quality which makes planning and design easy

In sanitary professional circles, KEMPER is renowned throughout Europe for its brand-name valves made of gunmetal and stainless steel. KEMPER valves for drinking-water protection are corrosion resistant and reliable. The corrosion-resistant gunmetal material complies with the strict German drinking water quality regulations, both now and in the future.

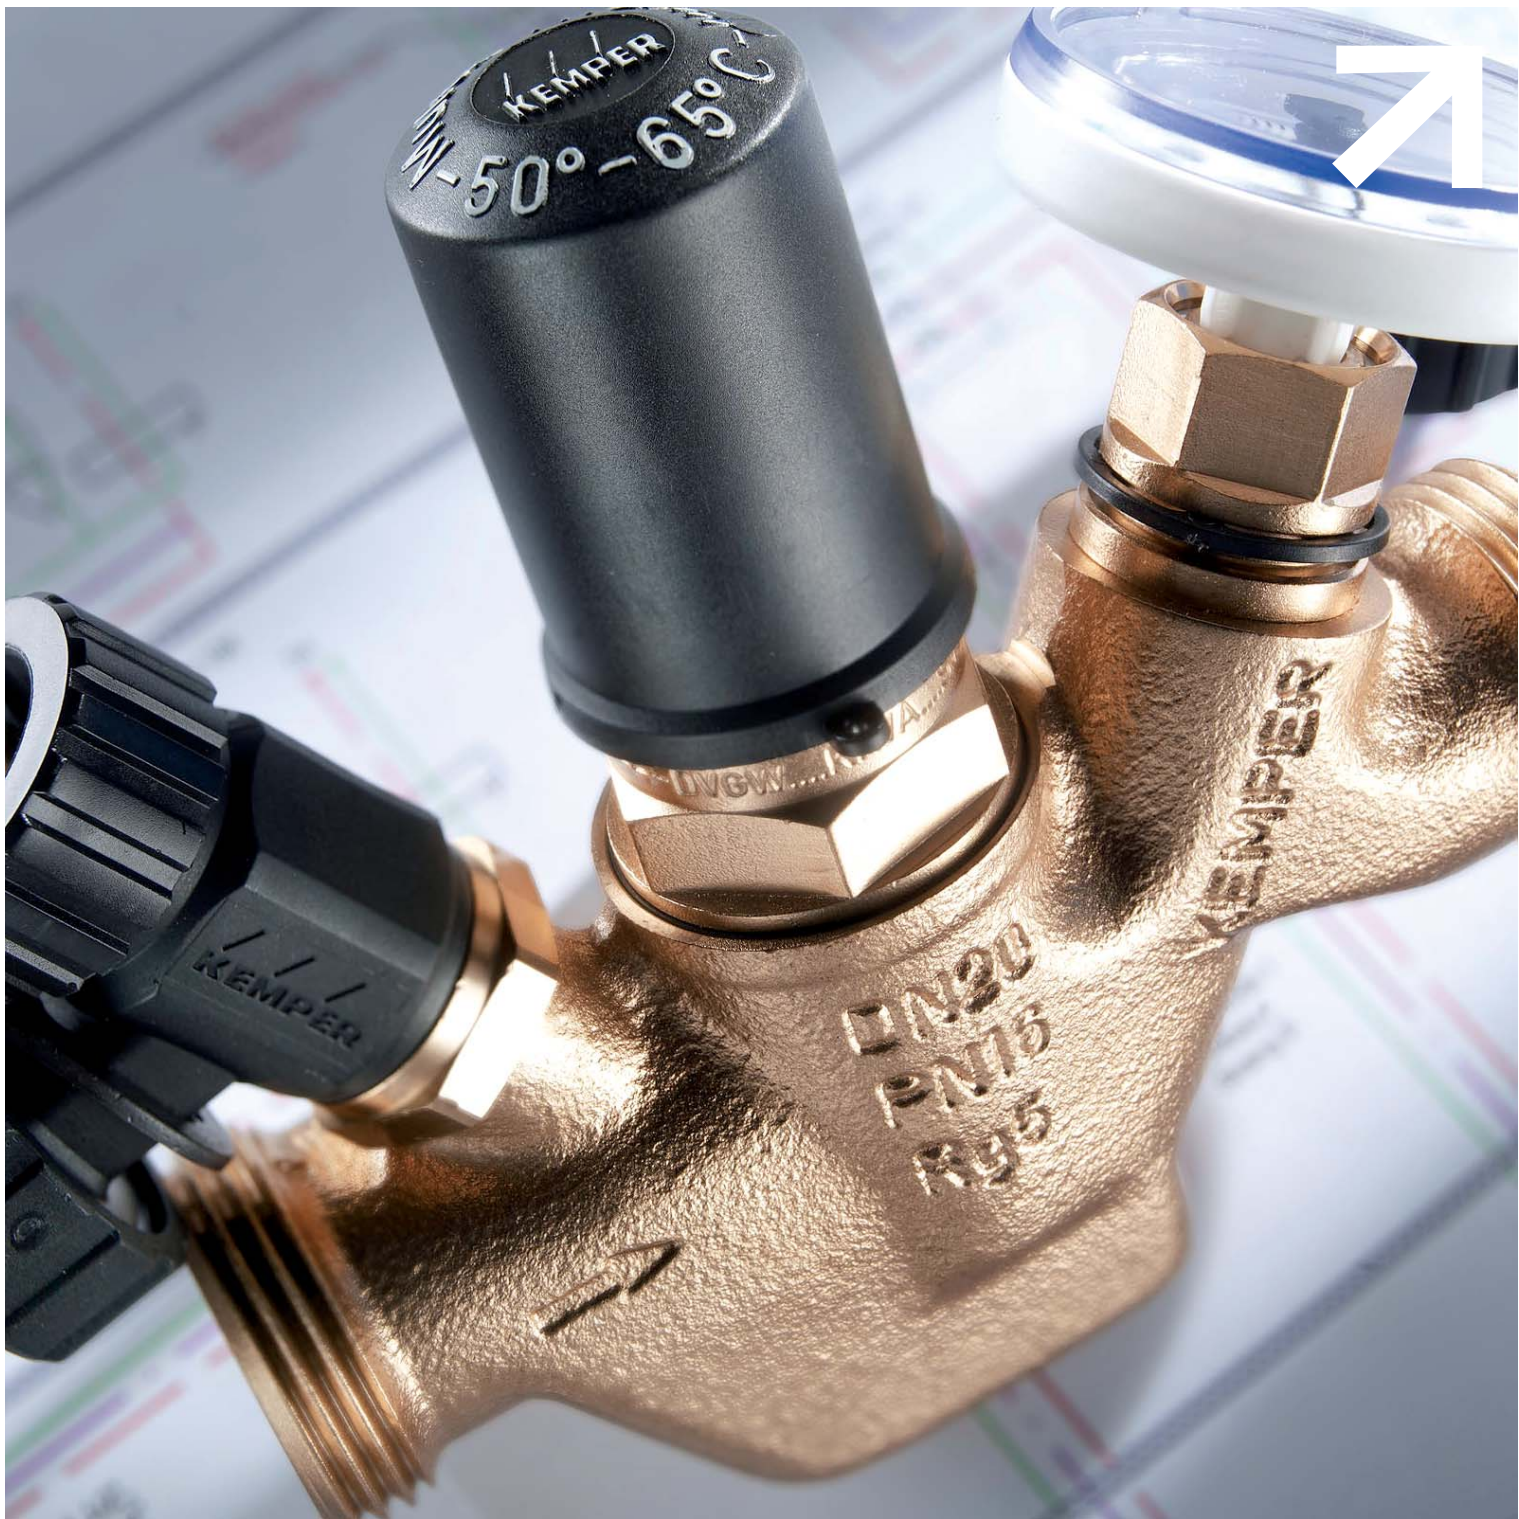

The extensive range is unique in this sector: stop-, protection-, regulating- and special-purpose valves, with surface and concealed mounts, in all nominal widths for all piping systems that are common in the market. Easy to install, durable, maintenance-free. KEMPER impresses with its high degree of

innovation in drinking-water hygiene. The brand has substantially influenced this market segment.

Products from KEMPER stand for high performance and reliability. Specialist wholesalers, professional planners, and sanitary manufacturers trust the reliability of KEMPER brand valves. And developers of major public and private construction projects do as well.

Range of valves

- ▶ Shut-off-, secure-, control-valves
- ▶ KHS Hygiene System for drinking water hot and cold
- ▶ Flush-mounted, concealed valves
- ▶ Shut-off & water meter combinations and assembly blocks
- ▶ Frost proof external valves
- ▶ Flanges, screw valves and accessories

KEMPER

KEMPER Cast products

Competence which meets your requirements

The experience gained from the long tradition of working with cast copper alloys makes KEMPER one of the top specialists for particularly high quality cast parts.

Leading sanitary and water system suppliers use KEMPER's competence to functionally and qualitatively supplement their range of products.

Whenever high grade red brass is considered as the construction material for sanitary and water system applications KEMPER is there for you with the know how it has gained from over 140 years non-ferrous metal foundry practice.

Give your product ideas a free rein

KEMPER will realize a product appropriate for its subsequent use which is optimally designed both with respect to casting techniques and its geometry.

There are no limits to the mechanical processing neither regarding quality nor the technical requirements. KEMPER produces 100%-tested, pressure-tight, ready to fit high grade red brass products for you. With Kanban production control, just-in-time delivery and a 24h delivery service, KEMPER satisfies individual customer demands.

KEMPER Rolled products

Engineering which guarantees your precision

Cold-rolled precision strips made of copper and special copper alloys are the third pillar in Olpe.

In the ultra-modern foundry, about 17,000 tons of copper alloys for semi-finished rolled products are being cast annually to produce strips with thicknesses of 0.1 to 3 mm and widths of 3 to 350 mm.

KEMPER supplies strips made from copper-based special materials with high-quality finishes and homogenous material structures. Rolling-mills with the latest measurement and control engineering facilitate the manufacture of strips to the tightest tolerances.

Highest standards for casting and rolled technology

KEMPER precision strips meet all customer demands for tinning, heat treatment, structural shapes, and individually coordinated delivery schedules, and tailor-made special packing forms.

The high quality standard provided in KEMPER strips is guaranteed by the most modern manufacturing technology, continuous process monitoring and certified quality management.

KEMPER Service Quality is our standard

**KEMPER, service and partnership,
they belong together**

KEMPER brand service is the promise of quality and performance provided to our customers. That means reliability and competitiveness in the market at high quality standards.

KEMPER supplies information material data for our customers such as tender texts, and software programs, this goes without saying. Furthermore we are constantly present at all important trade fairs. The KEMPER advanced training program with over 100 seminars yearly is unique.

At KEMPER, quality is an obligation for all our employees, resulting in products on which you can lastingly rely.

Service

Contact us if you are looking for product solutions for which our materials could be suitable. We would be pleased to work out the realization of your ideas in non-ferrous metal for you.
